

## Android for Media devices

As part of NeST's focus on the upcoming mobile platforms, NeST has started activities on Android platform right from the inception of Android. Recently NeST has secured a contract with a CE leader to provide an Android port for multi-media devices like STBs, and Media Players.

The device will run on OMAP and feature a customized media framework, new UI and support for integrating services like DRM/CA. The work will involve porting the Android kernel, customizing the media frame work, new media plug-ins and providing a GUI instead of the default Android GUI.
